## Patent claims

- 5 1. Fixing device (1) for producing an anchoring in an undercut drilled hole (9) in a panel (2), having an anchor bolt (3) which has fixing means (4) and an anchoring zone (5) having a portion (6) that widens in cross-section in the direction of insertion, **characterized in that** the anchor bolt (3) has in the region of the anchoring zone (5) a covering (7) of a resilient plastics material, and the anchor bolt (3) is anchored by means of a curable composition (8).
  - 2. Fixing device according to claim 1, **characterized in that** the smallest outer diameter of the covering (7) is smaller than the portion of widened cross-section (6) of the anchor bolt (3).

3. Fixing device according to claim 1, characterized in that the covering (7) consists of a silicone-containing plastics material.
